Learning Outcomes

- To learn about the voice recognition options available for smartphones, computers and mainstream technology
- To increase awareness of the occupational therapist's role in implementing voice recognition and other access methods to enable clients to participate in meaningful occupations
- To signpost participants to further information on enabling access to technology

RCOT

"Occupation" as a term refers to practical and purposeful activities that allow people to live independently and have a sense of identity. This could be essential day-to-day tasks such as self-care, work or leisure.

Think about your day-to-day life; would you be able to cope or live fully if you didn't have access to the internet? Or couldn't get out of bed in the morning?

RCOT 2018

I don't do tech – I'm a people person"

“RCOT recognises that technology should, and must be, integrated into our practice. So, next time you visit a person as part of your occupational therapy assessment, ask how they use technology in their life and think about what technology might be useful in supporting them to lead more independent fulfilling lives”

Paul Cooper Feb 2018

OT research

- OT literature has called for greater recognition of the use of online technologies in the profession (Verdonk & Ryan, 2008; Chard, 2007)
- In order to implement this within our practice we need to be able to apply recent evidence and also apply OT theory when considering a persons computer access needs

Meaningful Occupations

Assessment

- Is not about finding a technological solution
- Is about promoting function and independence
- Should take into account likely changes and developments

Augmentative and Alternative Communication: Supporting Children & Adults With Complex Communication Needs - Beukleman & Mirenda (2012)

Assessment

- Positioning

- Settings

- Alternative Access

Accessing Computer/ Tablet

- Operating system - Windows / iOS

Ease of Access options – sticky keys

On Screen keyboard

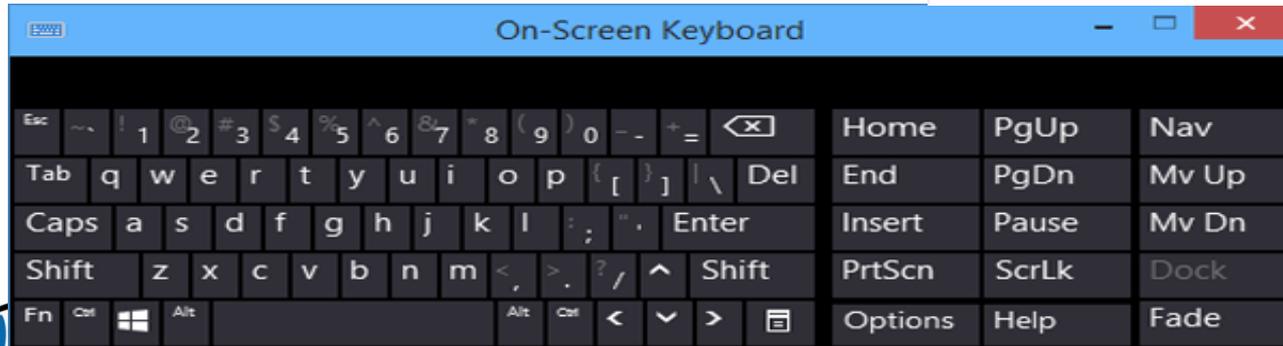

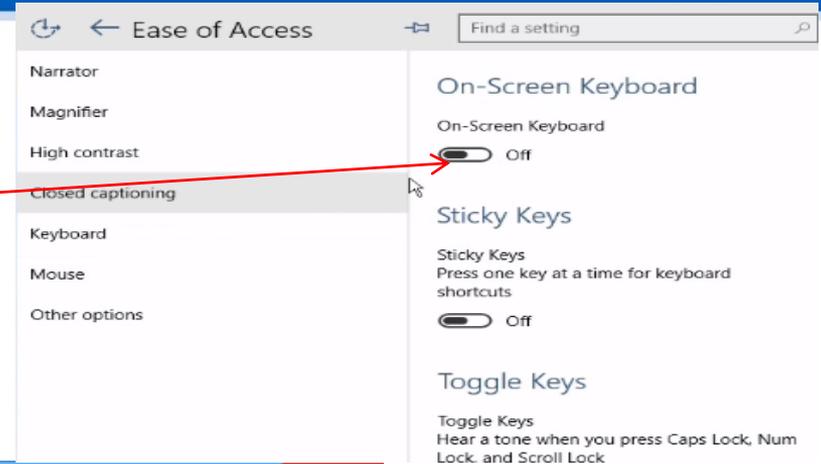

Speech Recognition and Mouse Grid

Additional hardware and software

On-screen keyboards

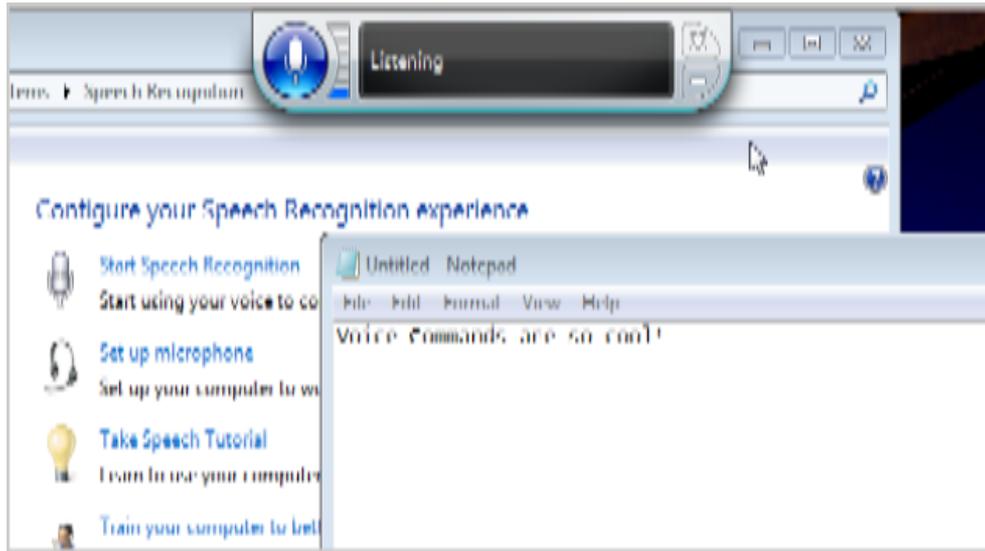

Select on-screen
keyboard

Speech Recognition

Windows

Smart Speakers

Amazon Echo

Amazon Echo Dot

Amazon Echo Show

Google Home

Google Mini

Google Home Hub

Applications For Smart Speakers

- Hearing Impairment
- Loneliness
- Progressive neurological conditions
- Spinal Injuries
- Visual Impairment
- Mental Health
- Environmental Control
- Fun!

Practicals

- **Match the definitions** - Google assistant, Voice Access, Siri, Cortana, Bixby
- **Mobile Phones:** iOS and Android, Explore accessibility options – Google assistant, Voice assistant , touch and hold delay, Easy mode
- **Computer access** :Try Mouse Grid on Windows 10
- Set up and try range of options in Windows ease of access
- **Smart Speakers:** Clinical applications and Discussions

Moving Forwards

*Best Care
Healthy Communities*

Challenge!

- Follow a relevant group on social media
- Explore accessibility options further in your phone/tablet /computer
- Discuss computer access for your clients at your next team meeting/in service training
